

**HELITAB**  
FOR  **AIRBUS**  
HELICOPTERS

Navigation and Mission  
Planning Application for  
**HELICOPTERS**

22 January 2016

**Air Navigation & Airbus Helicopters**

We are very proud to have developed the new application Helitab for Airbus Helicopters. Helitab relies on the same data and core technologies as Air Navigation but is specifically designed to be used in a helicopter.

Airbus Helicopters asked Air Navigation by Xample S rl to design a navigation and mission planning application specifically for Airbus Helicopters. With our great level of knowledge and expertise in the aeronautical field and application development, this was a perfect match. Together with Airbus Helicopters we worked and discussed different possibilities to develop an application that exactly fits their needs.

**HELITAB – Navigation and mission planning application for helicopters**

Helitab provides you with essential information while flying, and gives you the availability to assess helicopter performances during the whole mission, create and export routes, reproduce flights and check the weather. The development of this application was commissioned by Airbus Helicopters.

Do you have an amazing idea for a new application, but you don't know where to start?
